

Applied Drug Therapy Homework #9

On May 25th, AG, a 35 year-old male, presents to you with a history of “sneezing fits” and a watery-runny nose with some congestion during the night and first thing in the morning. It seems to have started when his new wife moved in with her two cats. He has taken some “Benadryl” which does help the symptoms but he does not like the sedation it causes.

1. What type of disease state would these symptoms suggest AG is suffering from? (5 points)

2. What other questions would you ask to confirm your diagnosis and to rule out other problems? (5 points)

3. Based on his history, what will be your first treatment course (pharmacologic and possible adjunctive information) to help AG with his symptoms?
 Complete prescription as needed for Rx item. (10 points)

Primary Care Associates, Inc. 1020 Wellness Road Resume Speed, KS (913) 123-4567		
Name		Date
Address		
City/State/Zip		Age/Wt /
Rx		
Dispense as Written		Substitution Permitted
Refills		DEA #

4. AG returns to your care several months later and states that the medication you gave him did not seem to be working as well as at first. What changes would you discuss about his medication regimen? (5 points)
